1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki et al in view of Ahn. Suzuki et al discloses the claimed invention, including in Figs. 2a and 2b the discharge chamber 13 having a single discharge outlet 13c extending therefrom. However, Suzuki et al does not disclose the recited pressure reduction conduit provided at a rear side of the housing and extending in a radial direction of the rear housing. Ahn teaches a compressor having a rear discharge chamber 42 and a pressure reduction conduit 47 provided at a rear side of the housing and extending in a radial direction of the housing. It would be obvious to provide Suzuki et al with a pressure reduction conduit connected to the single discharge outlet 13c at the rear side of the housing and extending in a radial direction of the housing, in view of Ahn, for the purpose of reducing the noise coming from the compressor.

3. Applicant's arguments filed April 20, 2005 have been fully considered but they are not persuasive. Applicant's remarks regarding Ahn have been carefully considered, especially the fact that Ahn teaches two discharge holes leading to the discharge conduit 47. However, Applicant appears to have ignored that Ahn is only the secondary or teaching reference and not the primary reference. Suzuki et al, the primary reference in the rejection, clearly discloses the single discharge hole in the discharge chamber, as is clearly seen in Figs. 2a and 2b. This single discharge hole would presumably reduce

the pulsations leading from the discharge chamber. It is believed that one of ordinary skill in the compressor art would be able to connect the discharge conduit of Ahn to the discharge hole of Suzuki et al without using the disclosure of the present invention.

4. This is a RCE of applicant's earlier Application No. 10/648,250. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
